ANNOUNCEMENT

COURSE DESCRIPTION, SYLLABUS, REGISTRATION FORMS

FALL 2009–2010 – Two Web-based Courses

CONSCIOUSNESS: THE WEBCOURSE
And

ADVANCED SEMINAR:

MIND, BRAIN and CONSCIOUSNESS.

Both taught by Dr. Bernard J. Baars

See: http://en.wikipedia.org/wiki/Bernard_Baars

bbaars@nsi.edu

Center for Consciousness Studies
University of Arizona, Tucson

http://www.consciousness.arizona.edu

With a Winter Holiday Break from December 20, 2009 to January 7, 2010.

If you are interested in Continuing Education Credits
please check the relevant box on the Registration Forms at the bottom of this document.

Both the WebCourse and the Advanced Seminar will run over 10 weekends, with two hours of Discussion Groups per weekend, mp3 audio files with lectures, written lectures and demonstrations via the web.

Discussion Groups for the WebCourse will take place on Saturdays and Sundays, 10am until 12 noon Pacific Time. For students who cannot be available at that time we will have an “asynchronous” Discussion Group. To check your own times for Discussion Groups, please visit http://www.timeanddate.com/worldclock/

The Advanced Seminar will take place on Sundays at 2-4 pm Pacific Time. It will be tailored for specific student needs and interests. The Seminar will be small and somewhat more demanding, with
advanced readings and a college textbook. Please contact the Instructor for details (bbaars@nsi.edu),
and see the Registration Form at the bottom of this document.

Consciousness: The WebCourse  2009 – 2010
Sponsored by the
Center for Consciousness Studies
The University of Arizona
http://www.consciousness.arizona.edu

See the Registration Forms at the end of this document.

COURSE DESCRIPTION  and SYLLABUS – Consciousness: The Webcourse

We can explore our own consciousness from our own, First Person perspective; share our
experiences with others, the Second Person perspective; and look at conscious beings from the outside -
-- the Third Person or "public" point of view.

These three basic perspectives organize our course.

Our First-Person Labs will take our private perspective, using Consciousness Diaries and
experiential demonstrations. You are enthusiastically encouraged to keep a Consciousness Diary, to write
down or audio-record your first-person experiences to explore.   We wil often ask you to refer to your diary
in our Discussions. If you want to write a topnotch diary you can’t wait very long --- your conscious
experiences fade very quickly. So you should write them down immediately, or even better, audio-record
them just as soon as you can. Your PC or Mac provide audio-recording software (with Quicktime or Word
programs), or you can use a tape recorder. If you want to record your dreams you should also do so
immediately after waking up. If you want to get very sophisticated you can convert audio to text. But a
program that allows you to skip back and forth to remind yourself is very useful. Scribbling notes also
works!

(We will give you an easy technique to enable you to experiment with your drowsy or “twilight”
states, which are very interesting and creative, and still unfortunately neglected.)

The Second Person perspective emerges in our relationships to each other, in
interpersonal experiences, in exploring ethical questions, and in the brain regions involved in romantic
love and parent-child attachment.
Scientific evidence is often thought of in terms of the Third Person perspective, which we can think of as "public" or "inter-subjective." But notice that with brain imaging methods, we can look at the brain from the outside, and learn a great deal about the way our mind-brains engage in the First and Second Person Perspectives as well! Brain imaging is very interesting (and no, we are not going to invade you privacy!) but human beings have been looking at each and trying to understand each other ever since the first mother looked at the first baby, and vice versa. So this is not some weird thing; it’s just that we have much better “shareable” evidence that today. If you have concerns about privacy and ethics, that is also worth exploring in this course. (It comes up under the Second Person heading…)

Our Lectures will explore new scientific findings about everyday consciousness, and also explore what we know about altered conscious states.

I believe the three classical viewpoints are very compatible with each other, and that they only provide three different sources of information. From that point of view, there are only practical questions --- what’s the best way to understand what happens when people fall in love? When they dislike or even hate each other? When we feel guilty or angry or excited? What do people experience when they are seeing the color red? What is the best way to know what the brain is doing? By being practical we can avoid many unnecessary controversies.

There are philosophers and scientists who adopt exclusive positions --- mentalism (idealism), physicalism (materialism), or various kinds of dualism. For example, the great contemplative traditions in Asia and the West are usually idealistic --- they often claim that the ultimate reality is mental or subjective. Science is often thought to be physicalistic --- it relies on the notion that publicly shared information is the most trustworthy, because it can be double-checked.

But in practice, ordinary life flips back and forth between the subjective experience that we have a headache and the public act of taking an aspirin (a physical object) for our subjective headache. Nobody has much trouble with that in practice.

Because this course is not devoted to philosophy --- which would take months or years to study in detail --- we will mainly take a "dual-source" point of view. That is, we will assume that our own, subjective, ego point of view is one useful source of information; and that our shared, intersubjective, public, sociocentric viewpoint is also useful. We will find this practical, common-sense way of switching between different points of view to be very useful in this course.
For us, the key question is the believability of each perspective. If you tell me that you see your computer screen in flaming red, I am happy to believe you for the purposes of this course. (If you see everything in a flaming red color, you might want to wear some sunglasses.)

We will not settle the philosophical question “what is consciousness?” but we will gain a better understanding of our growing understanding of consciousness in modern science, as well as in the great wisdom traditions.

We will do our best to make Consciousness: The WebCourse2009-2010 fun and exciting for you, as well as thought-provoking.

Announcements.

You will receive information about the WebCourse platform as soon as you register. Please address registration questions to Abi Montefiore at center@u.arizona.edu

Lectures will be posted online on the D2L site --- http://d2l.arizona.edu. Every week we will send out an mp3 or similar audio file of about a half hour. First-Person Labs are designed to explore your own experiences. We encourage you to do the F-P lab by yourself every week, since we hope you will be discussing your experiences with each other on the weekend on D2L.

All participants are encouraged to explore their ideas and experiences in small online Discussion Groups, led by Discussion Leaders.

Discussions will be held online on weekends, to encourage you to participate live. Asynchronous Discussions will be available to those who cannot join in synchronously.

Readings will include the textbook (below), as well as posted readings, powerpoint presentations, demonstrations, and more. We always explore new ways of teaching and learning in this course. This time we hope to explore Skype teleconferencing as one way to have real-life interactions with each other. But new technology is always tricky, so we cannot promise that audio conferencing will work smoothly. We just do our best.
OUR TEXTBOOK:

http://www.amazon.com/Theater-Consciousness-Workspace-Mind/dp/0195147030/ref=sr_1_1?ie=UTF8&s=books&qid=1254091318&sr=8-1

OTHER SOURCES:

http://books.google.com/books?id=Tv9fxXPCdtcC

See also www.bernardbaars.pbwiki.com ... and more as we go along.

The First Person Lab will be posted early in each week.

We hope you will join in D2L Discussions as much as possible. Don't be shy! (And if you do feel shy at first, just keep exploring your thoughts about feeling shy in your Diary! Shyness is a wonderful topic for this course.)

Please direct Registration questions to:

THE CENTER FOR CONSCIOUSNESS STUDIES, UNIVERSITY OF ARIZONA,

center@u.arizona.edu
WEEK 1. (September 20) First, second and third person: Approaches to the evidence.

Explorations of consciousness are very ancient. Science is a newcomer!

How can we explore our own experience without first solving metaphysical questions that nobody has been able to find a consensus on?

“Reportability” is the standard for 2nd and 3rd person explorations of consciousness. What if you can’t describe your experience? Psychophysics and contrastive analysis.

The Theater of Consciousness: A helpful metaphor. Metaphors are not facts!

What do we lose when consciousness is lost or reduced? The puzzle of the Minimally Conscious State (MCS): Terry Schiavo. Sleep and drowsy states. Meditation and “higher” or altered states.

READINGS:

Baars (1997), Prologue and Chapter One.
James (1893). Chapter on The Stream of Thought.
Online readings to be posted and emailed.

FIRST PERSON LAB 1:

How to keep your Consciousness Diary. Record your thoughts as soon as you can! Memories are ok -- but they are memories. Notice the difference in your Consciousness Diary. Are your memories after one minute the same as your memories after ten seconds?

Note: Did you decide to audio record your Diary or write it down? What are the pros and cons? How would you test somebody’s conscious experiences as accurately as possible? What would you lose in that process? All observations have tradeoffs.

**DISCUSSION GROUPS: (Saturday and Sunday, 10-12 noon, Pacific)**

Your first thoughts on your own experiences. Meeting other conscious people in the course. Your thoughts on your conscious encounters.

**WEEK 2. In the Theater: The bright spot of consciousness has limited capacity from moment to moment.**

Why multi-tasking has limits. Some interesting implications.

FIRST PERSON LAB 2: Your Consciousness Diary: What happens when you are “loading” your mental capacity? Slips and automatisms in musicians and others. Slips are usually minor, or funny, but there is some evidence that they may be involved in auto accidents and even major disasters… Can you record some of your slips --- in speech or action? Slips can be very revealing …

**DISCUSSION GROUPS.** Your Consciousness Diary. Exploring multi-tasking in everyday life. Do you notice slips, automatisms and speed changes when you are multi-tasking? What else do you notice?

**WEEK 3: In spite of our limited conscious capacity from moment to moment, consciousness also enables vast information access in the mind-brain.**

The astonishing amount of knowledge that we can access by way of conscious experiences.

Brain evidence for conscious contents. The *thalamo-cortical brain core* as the basis of global interactions in the brain. Why this part of the brain is believed to underlie conscious experiences.
FIRST PERSON LAB 3:

Your Consciousness Diary: Exploring your personal memories --- true ones, false ones and creative reconstructions of the past. Taste preferences or taste aversions are often very powerful memories of our early years. The feeling of knowing something about your past.

WEEK 4: In the "lighted area" of the conscious spotlight: Sensation, imagination and fringe experiences.

Plato and abstract ideas. Plato was a psychologist. The Hindu-Buddhist psychology of subtle experiences. Fringe experiences and the tip-of-the-tongue phenomenon.

Where in the brain does visual consciousness first become unified? Top-down and bottom-up processing: Cooperation in the creation of conscious contents.

FIRST PERSON LAB 4:

Life is full of ambiguities: Ambiguous and multiple meanings, figures and words. Feelings and fringe consciousness: The tip of the tongue and other feelings.

Notice that consciousness tends to collapse multiple meanings into one --- at any given moment. This is a fundamental insight.

**Connotation and allusion, meaningfulness and meaning.**

Illusions of conscious continuity: The blind spot, peripheral vision, and eye fixations in reading.

**WEEK 5. Outside of the lighted spot on the theater stage:**

"Working memory” as extended consciousness.

How focal consciousness interacts with working memory. What is working memory?

Inner speech and the visuospatial sketchpad. The magic number, 4 thru 9.

The front half of the brain: working memory and extended consciousness.

**FIRST PERSON LAB 5:**

Working Memory load in everyday life. The visuo-spatial sketchpad in everyday life: our visual imagination.

Try to compare our visual images in normal waking, and in the Twilight State. (See our Twilight State Experiment…)

Is mental effort like a muscle? Some amazing findings.

Your inner speech, inner humming, inner actions, and inner running, jumping and dancing. When people watch sports on TV they seem to mentally run through the same actions. (Not consciously, necessarily.)
**WEEK 6. Aiming the spotlight: Attention, absorption and the construction of reality.**

Selective attention. Eye movements. Voluntary and spontaneous attention.

Brain basis: Prof. Tutis Villis brain slideshow for eye movements. (On the web).

Selection biases --- in opinion formation, culture, cults and indoctrination. The amazing stability of belief systems.

**READING:** Baars (1997). Chapter 4.

**FIRST PERSON LAB 6:** Daniel Simons’ demonstrations of inattentional blindness.

Are you “Absent minded” or “other-minded”? Try the Stanford Hypnosis Scale. Attention and absorption.

**WEEK 7. It is dark backstage: The unconscious context of conscious experiences.**

Current concerns, and Unfinished business, as active contexts in the stream of consciousness.

Interpreting projection, in scientific terms. Our thoughts may unconsciously trigger moods. Emotional trauma as an active context.

**FIRST PERSON LAB 7:** Fixedness: being blind to the obvious. Priming conscious thoughts. Breaking rigid contexts for creativity. Unconscious contexts and interpersonal activities.

**WEEK 8. The Stage Director in the Theater of Consciousness.**
Split brains and divided personalities.

**Reading: Baars (1997). Chapter 7.**

FIRST PERSON LAB 8: Your Consciousness Diary. What's free about free will?

The devil made me do it! Counter-voluntary acts. Collecting errors of action and speech. Everyday dissociation: accidents, earthquakes. William James on fugue and hypnosis.

**WEEK 9. Sharing our consciousness with others.**

READING: Baars, Chapter 8, 9, and Appendix.

Intersubjectivity. About age three or four, toddlers begin to share their experiences. “Look, Mommy, airplane!”

The origins of shared consciousness: empathy and “negative empathy.” Theory of Mind. Why doesn’t your dog look where you point? Do ravens have a Theory of Mind? Autism as a disorder of interpersonal empathy. Temple Grandin and Asperger’s Syndrome. We need to share our contexts of communication.

First Person Lab 9: Your Consciousness Diary.

Imagining how the world seems to others. The pitfalls of mindreading.

The ethical contract: Person-to-person relationships.
**WEEK 10. Some concluding thoughts.**

What is it good for? Functions and theories of consciousness.

The biological roots of the conscious brain. Some theories.

Consciousness in mammals and other critters.

When does a fetus become conscious?

Consciousness as a standard for ethical personhood. The growing evidence for animal consciousness.

FIRST PERSON LAB: Please take a look at your Consciousness Diary from Week 1 to Week 11. What do you notice?

---

The Registration Form for Consciousness: The Webcourse Fall 2009 can be found on the next page following that.....

You will find the Registration Form for the Advanced Seminar
I would like to participate in  **CONSCIOUSNESS: THE WEB COURSE**

Times: Discussion Groups will be held on Saturdays and Sundays 10am - 12 noon, Pacific Time. An asynchronous Discussion Group will be provided for participants who cannot make those times. You are asked to participate in one Discussion Group, either on Saturday or Sunday.

**YOUR INFORMATION**
